Subject: sample size
DSS: Yes

Dear Martin,
attached is the latest version of the sample size justification.
Ulrich Mansmann will go over it once more, once it has been included in the final version of the study protocol.
You may allways want to improve power etc., so we might want to go to 95% power for example, since we can manage a sample size of 700 total.

At the moment we have 660 total including about 10% reserve for dropouts. If we leave it as is and ibncrease our sample size to 700 then we have more reserve in case of dropouts (or minor protocol violators we may detect after inclusion of the subject)

best regards

Bernhard

as I´asked you some days ago would you please send the statistical part to Qiwei?

Thanks

Martin

Dear Martin,

When you have time, could you please let me know the justification for the sample size?

Thanks,

Qiwei

Thank you very much,

Barbara for stopping by and providing input which will help us with some of the complex logistics.

Kind regards,

Martin

Dear All,

please find attached some of the slides of the Early Biomarkers of Inflammation Study. Might I kindly ask you let me know which of the biomarker(s) you would either omit or add to the list and why you would suggest doing so.

Since we shall have the protocol meeting next Monday around 3:00 AM EST we would appreciate your comments until tomorrow night.

Many thanks in advance and kind regards,

Martin
